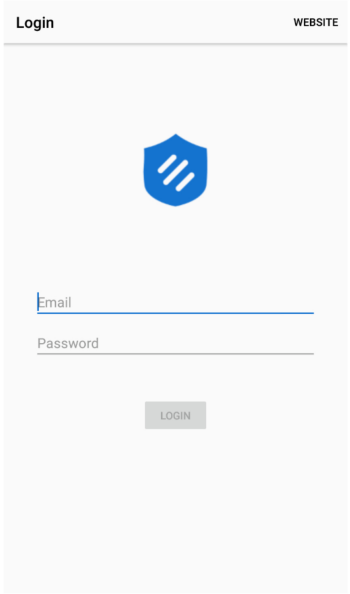
Set Up V2net on Android

App Download

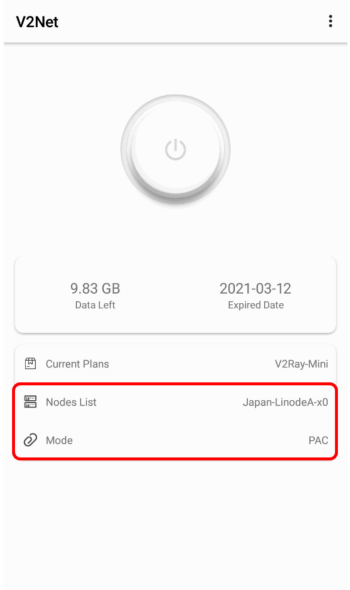
Click here to download the Android client . Since the app is downloaded via a browser, you may need to adjust your phone's security settings to install it.

How to Use the App

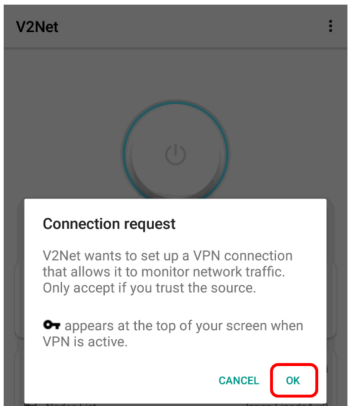
After installation, open the app and log in using the account you registered on our website.



Select your preferred **server node** and **proxy mode**, then tap the **Connect** button.



For your first connection, when prompted with a VPN access request, tap **Allow** to grant VPN permissions.



Once connected successfully, you're ready to go. If you encounter issues accessing certain websites or apps, try switching the proxy mode to **Global Mode**.
